

AI Basics Manual

Artificial Intelligence (AI) is the simulation of human intelligence in machines.

Machine Learning is a subset of AI where systems learn patterns from data.

Deep Learning uses neural networks with multiple hidden layers.

Computer Vision allows machines to understand images and videos.

Natural Language Processing helps systems understand human language.

RAG stands for Retrieval-Augmented Generation.

Embeddings convert text into numerical vector representations.

FAISS is used for similarity search in vector databases.

Streamlit helps developers build simple Python web applications.
